

Use case flow

Name: Tusti S

SRN: PES1UG24CS505

Sec: 5I

Goal:

Vaccination slot booking

Actor:

Citizen Registrant

Trigger:

Citizen registrant wants to book an available vaccination slot.

Pre-conditions:

1. Citizen is already registered into the system for the vaccination process.
2. Vaccination slots are available in atleast one vaccination center for booking.

Main success scenario:

1. The citizen registrant selects the option to book a vaccination slot.
2. The system displays all the available vaccination slots under each vaccination center.
3. The citizen selects an available, preferred slot under a center.
4. The citizen presses the 'book slot' button.
5. The system checks if the citizen's previous dose was taken before the required interval of time.
6. The system confirms that the citizen is eligible for the particular vaccine dose.
7. The system books the vaccination slot.
8. The citizen gets a confirmation message saying his/her slot has been booked successfully.

Alternative flow:

- 5.1 The system come across that the citizen's minimum required interval of time from the previous vaccine is not met.
- 5.2 The system flags the citizen as not eligible for next dose of vaccine.
- 5.3 The system does not allow the citizen to book the chosen vaccination slot.

Post-conditions:

1. The citizen registrant's vaccination slot is reserved for him/her.
2. The vaccine booking details are all arranged properly in the system's database.
3. This particular slot is no longer shown as available to other citizens trying to book their vaccination slots.
