3. Burndown chart:

4. Epic progress:

5. Q n A (Reflection Questions):

1. Did your estimations reflect the actual effort?

A. **Yes**, the estimates were mostly the reflection of my efforts. The story points helped me determine how much of my project I have actually completed in terms of the amount of effort and time I put into the project. Help **me keep of track of how much I have done**, how much is in progress and how much of my project is still left to do. At the end I was able to track the project more efficiently with the planned stories and complete the sprint in a well organised manner.

2. Was your backlog well-prioritized?

A. **Yes**, my backlogs were well-prioritized based off of how much each story needs to be weighed w.r.t. the importance of it in the project. Important stories got a **“high”** priority, while the others got a **“medium”** priority. I did not feel the need to put a low priority to any of my stories cause they were important in some way or the other and needed to be addressed as part of the main crucks of the project.

3. How did your simulated sprint align with your plan?

A. The sprint I simulated was well aligned with my plan. I moved the stories from **“to do”** → **“in progress”** and from **“in progress”** → **“done”** as and when I had planned to do it. By the end of the **1 week sprint**, all the stories were completed according to plan.

4. What insights did the burndown chart give about your team's capacity?

A. The burndown chart shows that the work done **peaked at the beginning** of the sprint. As the sprint progresses, the amount of **work done decreases gradually**. I started the sprint off with **21 story points** and by the end of the sprint I had **0 story points**, which indicates that all work has been done and that the sprint is completed. Overall the burndown chart says that work was completed slowly and gradually and not all at once. This shows that the **planned work was successfully completed within the sprint**.
